DETAILED ACTION

1. The amendments concerning the claims, drawings and specifications have been acknowledged and will be entered.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over US Patent 6,094,187 to Jones et al and applicant's admitted prior art on pages 1-2 of the specification.

The reasons behind the rejections are the same as the rejection outlined in the first office action dated 4/24/2003.

Response to Arguments

3. Applicant's arguments filed on 9/24/2003 have been fully considered but they are not persuasive.

The amended claims with the additional limitations does not present claim for allowance. The amended limitation of having "adjacent ones of aid plurality of discharge cells constitute a discharge cell block and each of the aid adjacent ones of said plurality of discharge cells is separately driven according to said respective pixel data of said input image signal" does not distinguish uniqueness form the Jones reference.

On column 8, lines 7-17, Jones states that “spatial dither... in which each pixel comprises two subpixels... data signals D1a and D1b are *independently* applied to the subelectrode tracks.” In another words, the subelectrodes are separately driven.

In response to the remarks offered on page 8 of the present office action #9, Jones does disclose a single signal D1, D2, ... Dn on column 7, line 17.

Lastly, Jones acknowledges in his disclosure that his methods are merely “possible temporal and spatial dither techniques” (column 7, line 60) and are “non-limiting example(s)” (column 8, line 9). One skilled in the art understand that the data can be provided to the perform spatial and temporal dither in several different ways, all of which still based on the underlying principle of the dithering described by Jones et al.

Conclusion

4. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
